Global Conference on Advances in Business and Social Sciences (GCABSS – 2020 Online)

Comments and Questions
GCABSS 2020

Paper No. 201213

Comment 1
Nice paper. It offers new insights into the interrelationships among factors, such as technological, personal, organizational, trust and environmental, which identify technology adoption.

Answer: Thank you!

Question No. 1
Are the factors affecting technology adoption the same for all countries?

Answer: No. It differs from country to country. As, I have mentioned in my presentation that as a developing country, employees face some challenges while adopting the technology. Perhaps, as already a developed country they have some other challenges while adopting the technology.

Question No. 2
The conclusion part of your presentation is very short. Can you provide some additional information about the findings of your research and their possible implication?

Answer: Our main findings reveal that technology adoption is identified as the significant factors. These include technological, social, organizational and trust. The findings will direct the decision-makers in the government sector to make the right policies and appropriate steps that can enhance the efficacy of adoption of e-government among the employees that can further enhance the public interest of Mission Mode projects.

Implication: This research will help the government organization to focus on the critical factors required for successful adoption of e-government. Successful adoption of e-government may lead to an improvement in job performance among the employees which will result in efficient delivery of services to the citizens.
