GCABSS 2020

Paper No. 201231

Comment 1
Team's trust level amongst the team member is an important factor enhancing the work morale and efficiency of an individual member. The presenter did a study related to a certain energy sector in Poland and confirmed that team trust helps improve the organization's performance as a whole. This is a good study, and I would like the team to see, is possible, to make the study broad-based by including the data from other sectors of the economy also. I understand that at present, the researchers (of this study) may not be able to do that, as the research is funded by an organization for a particular subject and sector. But, I would like to encourage them to see if this can be done for their future studies.

Comment 2
It is obvious from many earlier studies that team cohesion bolsters the team performance. Also, better teams do results in higher entrepreneurial performance. That is all common so far in this and earlier studies. However, the data set used in the study makes it a sectoral performance with a specific and limited scope.

Comment 3
What is strange in this study? I wondered about this aspect and found it very hard to come up with some useful advice to offer to our presenters from Poland. Finally, I think I find it hard to accept that data is robust enough to make a universally applicable study as far as this study's conclusions are concerned.

Question No. 1
Why the energy sector only?

Question No. 2
How would you define team trust in terms of analyzable variables?

Question No. 3
Do you plan to extend your research's applicability and, if yes, how do you propose to do that?

Replies by authors: Dec. 5-15
